Product Introduction

RD1P0 series on-board DC-DC converter is a high-power, dense, high-efficiency DC-DC converter specially developed for new lithium electric vehicles, logistics vehicles, special vehicles, construction machinery and other new energy vehicles.

The module is designed with full digital control technology, with flexible and intelligent control, good protection characteristics and strong system robustness. The built-in microprocessor communicates with the monitoring unit, and the parameters in the machine can be set by the higher-level monitoring unit or adjusted by the higher-level monitoring unit through the CAN interface.

It has multiple protection functions such as input over-voltage and under-voltage protection, output over-current protection, output over-voltage protection, output short-circuit protection, and over-temperature protection

ixey specifications.					
Model	Input voltage	Rated output	Rated output	Output voltage/	3D
Widder	range	power	voltage	current range	
AT-RD1P0048	40~80VDC	1.0KW	14VDC	0-16VDC/0-71A

4. **User Guide**

4.1. Block diagram of electrical connections

4.2. Product Installation

Part number	RD1P0 series					
Product type	On-board DCDC					

	Mounting hole aperture	Ф9
Mounting screws	Number	4
	Screw modelrecommended	M8*10 Allen socket combination screw

Install and secure this product

Align the mounting holes, lock the fastening screws, and secure the power supply.

Tightening force distance requirements

When installing, according to the size of the screw, the connection method, etc., use the appropriate torque for installation, refer to the following table for details:

Specifications and models		Tightening torque (torque range: ±10%)/(unit: Kgf.cm)							
			Steel- plastic		General connections		High-density connectivity		
Categories	Sub- categories	Plastics - Plastics	Copper - Copper	Steel - Steel	Copper-cast aluminum Steel- aluminium profiles Steel-copper	Steel - Steel	Steel - cast aluminum Steel- copper	Steel- aluminium profiles	
Allen	M2		0.8	1.5	1.5	2.5	2.5	1.5	
socket	M2.5		1.6	3	3	5.5	4.5	3	
screws	M3	1.5	3	5.5	5	10	8	6	
	M4		6	12	10	16	14	12	
	M5		10	20	13	30	28	20	
	M6		15	30	28	50	48	30	
	M8					80	80	-	

4.3. CAN communication protocol

Projects		Technical indicators	Remarks	
Crystal oscillator tolerance		$\pm 0.15\%$	within the operating temperature range	
Communicati on rate		be configured through the background are, and it will not be lost after power failure	The tolerance is ±0.375 Kbit/s	
Sampling points	The sar	npling point should be set close to but no later than 7/8 of the bit time		
Transceiver	The n	naximum transceiver "ring delay" (from send to receive) is 300 ns	CAN transceivers should comply with the ISO 11898-2 standard	
Termination resistor	The DC	ne DC-DC CAN communication circuit has no 120 ohm termination default		
Default CA communica protocol	tion	PDF 车载DCDC默 N控制通讯协议		

4.4. Background Debugging Software Description

Product type		On-board DCDC
Background software coding	2001 Setup V2.0.exe	
Background software communication mode	CAN communication	Baud rate 125K/250K/500K adjustable
Installation and usage assistance		

Support CAN box	1. Beijing USBCAN-2I	Aitai
Brand 1	2. Beijing USBCAN-I	Aitai
Support CAN box Brand 2	TBD	

4.5. Troubleshooting and Confirmation

Fault phenomenon	Common causes of failures	Troubleshooting
	High Voltage Input Exception (None or Reverse)	Check if the high-voltage input is normal
The power supply has no output	12V voltage input port is abnormal (none, over/undervoltage, reverse connection)	Check whether the 12V voltage input port is normal
	The output is disconnected	Check whether the output connection is normal
	The signal connector is not properly connected	Reseat the signal connector
No packets are	The CAN cable is reversed	Adjust the CAN line sequence
sent from DC-DC	The communication protocol does not match	Compare whether the protocols match
	Baud rates don't match	Compare whether the protocols match
	Input short circuit	Check if the high-voltage input is normal
The distribution box high voltage input fuse is damaged The product reports a fault signal	Input over/undervoltage, output over/undervoltage, overtemperature, output short-circuit/overcurrent	Check the input voltage, output for overcurrent/short circuit, turn off the power, let stand for 10 minutes, if it still fails, contact the manufacturer.
Overtemperature	Air-cooled machines: The fan is stalled or the air duct is blocked	Check the fan and air duct
failure	Water-cooled machines: No coolant or too high coolant temperature	Check that the coolant is normal

5. Notice and Precautions for Users

Please pay attention to the Warnings and Precautions section before using the product. Incorrect operation may result in damage to the power supply or cause a fire. Please confirm that you have read the warnings and precautions before using the product.

Warn:

It is strictly forbidden to disassemble the product for maintenance, debugging and modification without authorization;

When powered on, please keep your hands and face away from the product to avoid accidental injury; There is high pressure and high temperature inside the product, please do not touch the internal components, which may cause electric shock or burns;

During use, if there is abnormal noise or odor in the power supply, please turn off the input immediately;

Connectors that meet the specifications must be used to ensure that the plugs and sockets are tightly connected, as loosening may cause local heating and fire;

Never charge a battery that has been damaged or cannot be charged;

Please use the power supply within the technical parameters, if it is used beyond the range, it may cause damage to the product;

When the battery is charged normally, please keep away from fire sources and flammable and explosive materials;

Please avoid leaving the product in a rainy location for a long time;

For AC power supply, choose a three-core cable with a grounding wire, and install the ground wire correctly; Please confirm that the shell is intact before installation, if it is damaged, please replace it immediately or contact the manufacturer.

Notes:

Confirm that the product input/output terminal and signal terminal are connected correctly in accordance with the product manual; When wiring, please cut off the input power supply, and do not plug and unplug the connector with power;

The input/output of this power supply requires an external blown fuse or other overcurrent protection device; It is necessary to consider the possible electrical hazards at the output end when the product is used to ensure that the end product user does not come into contact with the product; End equipment manufacturers must design protection schemes to ensure that operations are not hazardous due to accidental contact of engineering personnel or tools with power terminals;

Once the safety protection of the equipment is damaged, the equipment must stop working and be disposed of with reference to the relevant maintenance regulations.

When the power supply equipment is transferred from a cold environment to a warm environment, condensation may cause a leakage hazard problem, so the grounding requirements must be strictly enforced;

The device must be connected to a power source by a qualified person.

The power supply must be shut down for five minutes to allow the capacitor to have sufficient discharge time before the power supply equipment can be maintained.

Pay attention to the safety of use: where there are safety warning signs and high-voltage signs, avoid touching with your hands to avoid electric shock and burns.

6. Reference to Standards and Specifications

7. Packaging, transportation and storage Packaging

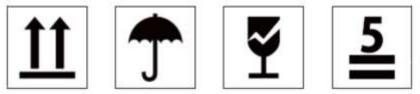

Packaging

The product packaging information is as follows:

Packing quantity and box information	The net weight of the single machine is Kg	3.5Kg	
	The outer dimensions of the	390*295*157	
	box are mm		
	The number of complete	2	
	machines in a single box		
	The total weight after	10Kg	
	packaging is Kg		

There is a product name, product model, and manufacturer name on the packaging box; The technical documentation supplied with the product in the packing box should include the factory certificate of the product. When the product is transported, there should be a firm packaging box, and the box should be used outside the box to comply with the provisions of the relevant national standards and should have signs such as "care and care" and "moisture-proof". The boxes containing the products are allowed to be transported by various means of transport. Direct rain and snow and mechanical impact should be avoided during transportation. And attach the transportation

mark, as shown in Figure 7-2 below:

Transport signs

Deposit

When the product is not in use, it should be stored in the packing box, the warehouse ambient temperature is -10-40 °C and the relative humidity is not more than 80%, the warehouse is not allowed to have harmful gases, flammable, explosive products and corrosive chemicals, and there is no strong mechanical vibration, impact and strong magnetic field, the packaging box should be at least 20cm high from the ground, at least 50cm away from the wall, heat source, window or air inlet, the storage period under the specified conditions is generally 2 years, and the inspection should be re-conducted after more than 2 years.

The product should be stored in a ventilated, dry place. At the same time, it is necessary to avoid high temperature sources, fire sources and chemicals. Store neatly and avoid throwing away.
